

Some rules to follow:

1. All users (logged in or not) can READ anything
2. Authorized users (logged in) can CREATE projects and tasks for their projects
3. Logged in users can EDIT / DELETE only their projects
4. Logged in users can CREATE / EDIT / DELETE any task
5. Any user can CRUD any user. (sounds stupid, I know - no time for admins)

Flow Example:

1. User logs in, he gets a token which will be used from now on for any request
2. User creates a project
3. User creates a task for that project
4. User edits reviewer of the task with another existing user
5. User edits logged time for that task, remaining time expected to change
6. User logs out
